

This is configuration block for authentication in appsettings.json

```
"Authentication": {  
  "AllowRemember": true, // Allow to remember user name on first page  
  "AgreementHtmlBlock": "", //html block for license terms, only shows on first  
page  
  "PresentedByHtmlBlock": "", // logo, power by block. Showing on all pages  
  "ApiKeys": //this is a set of keys for api integration, each key corresponds to  
user it will be running as. Key can be any text, Value is user name  
  [  
    {  
      "Key": "2345345RGYFHFGHMMWEXCVURG",  
      "Value": "webuser@local"  
    }  
  ],  
  "ActiveDirectoryOptions": {  
    "Enabled": true, // allow to be used  
    "Priority": 0 // 0 is highest. When both priorities are the same, both ways  
allowed. If one set ActiveDirectoryOptions priority to 1, and user have MS email set,  
AD integration will not be allowed. If user does not have MS account, he will still  
able to log in using AD  
  },  
  "MicrosoftJWTOptions": {  
    "Enabled": true,  
    "Priority": 0,  
    "Tenant": "common", // this and key below described in different document  
    "ApplicationId": ""  
  }  
}
```
