

There are 2 block you can add on log in page, Agreement and Presented By. Both are free from HTML, the difference is first only displaying on first login screen (where we are asking for username only), and second on all of them.

```
"Authentication": {  
  "AgreementHtmlBlock": "</br><div>By continue, you agree to <a  
href='http://www.acme.com'>terms and conditions</a></div>",  
  "PresentedByHtmlBlock": "<div>Presented by</div><br><span><img  
src='https://encrypted-tbn0.gstatic.com/images?q=tbn  
%3AAND9GcTdAvTXLBhojwx_tG6opvuyNj_6LoWQhqRiWD6SLnjiT0ZUM1f1&usqp=CA  
U'>",
```

The changes in those entries only taking effect after IIS server restart
