

Lateral Data Release Notes

Product: Viewpoint
Version: 5.3.5
Release Date: June 11, 2012

What's New in Viewpoint 5.3.5

Common	Day Light Savings	Feature added to accurately reflect date/time changes due to day light savings occurrences. Option will be ON by default for all new projects after the 5.3.5 upgrade. It will be OFF for all existing projects.		
	Reports	Necessary reports updated to reflect day light savings addition.		
Processing	HTML	LDMHT set as default value for 'Type of HTML Generator for Messages' option.		
	Tiffs	Option added when creating landscape tiffs to flip to portrait or remain as landscape.		
	Miscellaneous	Ability to detect password protected and corrupt PSTs.		
	Import	Use of the DocDate field in Import has been replaced with MainDate which reflects the same date hierarchy used when processing native data.		
QC Application	Miscellaneous	Ability to select multiple files and reprocess them all at once with the same settings. This option is currently only available locally.		
Review	Doc Viewer	Oracle Outside In viewer upgraded. Large number of unsupported file rendering scenarios resolved.		
	Miscellaneous	New permission, Reset Tags, added to restrict access from all <i>Reset</i> options in right click menu of <i>Documents</i> panel.		
	Saving	Option added to consolidate family members to a single PDF when saving using the Tiff Viewer selection.		
	Tags panel	Ability to collapse/expand Issue Tag categories.		
View Manager	Keyword Manager	When deselecting 'Highlight Always' check box, color selection no longer changes to green.		
Assisted Review	Miscellaneous	Ability to populate Documents panel in Review with AR Probability and AR Prediction fields.		
Delivery	New Fields	Name	Type	Description
		Excel Comments	True/False	Indicates if a MS Excel document contains comments.
		Track Changes	Text Field	Yes or No field ONLY for MS Word documents. If track revisions is enabled then Yes, If track revisions is not enabled then No.
		Speaker Notes	Text Field	Yes or No field ONLY for PowerPoint documents. If the file has speaker notes Yes. If the file does not have speaker notes then No.
		Word Comments	Yes/No	Indicates if a MS Word document contains comments.
		Message Header	Long Text	Message header of the message. Combination of fields currently available.
		MAILATCHFILE	Text Field	"M" for mail item, "A" for attachment, and "F" for loose file.
		Media	Fixed-Length Text	Indicates type of record (e.g. "E-mail", "E-mail Attachment", "E-Doc", etc.)
	Settings	Ability to copy settings across projects.

Bug Fixes

Processing	Miscellaneous	Rare issue where characters in header fields displayed as XML escape characters instead of actual characters.
Review	Printing	When printing multi page document with some pages in color and some not, error message no longer generated.
	Saving	When saving X-Ref file with custom fields, error message no longer generated.
Delivery	Miscellaneous	Now able to populate BegBates_Prod, EndBates_Prod and production renderings to Review for Later type delivery. Newly created field values and production renderings from new delivery will populate instead of those from the original delivery.
ND Similarity Viewer	Build ND	Documents with no text files no longer being assigned to the large default ND Group.
