

What's New in Viewpoint 6.0?

Note: Release notes are not meant for end user distribution. Items in blue are recommended to be communicated to end-users.

Common	New 'List' submenu when using the apply filter functionality allows users to easily input multiple strings.
	New icons added to the dashboard and some sub menus.
Processing	The text and HTML sizes are now stored on a per document level for reporting purposes. In addition, the size of a media's index is also stored.
	Better handling of PowerPoint files with a 'Read Only' designation.
	Added ability to click on a 'job complete' notification to be taken directly to the processed files.
	PDF job option files are now automatically suppressed during processing.
	Non-usable oledata.mso and editdata.mso files are now automatically suppressed during processing.
	If a media has an index status of 'Done', when a new <i>Create Text, Extract, or Metadata</i> task is run, the index status will change to 'Need to process'.
	Posting now available on the context menu of the medias panel of the index tab.
	In various panels a new context menu option 'Go To Document(s)' allows users to take the selected documents and automatically find them within the process tab.
	Added gauges to the project tab to monitor the overall health of the processing environment.
	Added summary information regarding deduplication rate to the Dedupe Set panel.
	New option 'Run Only For Required and Not Done' allows users to bulk submit many files for processing, but only process files without a status of 'Done' and 'Not Required' for that task.
	Added document count to view selector panel.
	Added Custodian ID and Scope ID fields to field selector in the process tab.
	Added support for the Chinese productivity suite WPS/Kingsoft Office files (ET/DPS/WPS extensions).
	Simplified dialogues for Auto Slipsheet and Auto Ignore windows.

Viewpoint 6.0 Release Notes

Importing	New error message provided where there are a mismatched number of columns due to a wrong delimiter in a cross reference file.
	Import template list is now sorted alphabetically.
	Documents auto-slipsheeted during importing will now receive a slipsheet reason of 'Filtered by File ID or Category'.
	Added option to compensate for daylight savings time during metadata imports.
	The IsEmailAttachment value is now automatically calculated during importing. The relevant importing field is no longer possible to map.
	Added new option to limit the number of columns to load in the X-Ref Content Viewer.
	Added ability to restart a failed job.
	Improvements to mapping custom fields.
Reporting	In the 'Media Size' report the size of imported medias is now calculated as the sum of all imported natives, images, text, html, and tiffs. In previous version of this report sizes of imported attachment and embedded objects were not included.
	'Email Sent Date Statistics' report now allows for grouping by custodians and scopes.
	Added the ability to filter by forms on the Redaction QC report.
	New Visual Reporting module. Many reports now contain charts and graphs that can be manipulated for exporting or view building.
	Users can now sort reports by a selected column prior to export.
	New 'Keyword Hit List by Custodian' report.
	New 'Word List' report.
	'Decisions per Hour' report replaced with a more precise 'User Productivity' report.
Review	Reports reviewed and optimized for both performance and stability.
	Redactions can now be applied to native Excel and CSV files without needing to tiff.
	IsRedacted field now represented in two fields, one called 'Native Redaction' and another called 'Image Redaction'.

Viewpoint 6.0 Release Notes

	Added a field selector to the dashboard 'Source Selector' to only show some production tags.
Review (cont.)	Removed error when user profile defaults to a project that no longer resides in the environment.
	New option 'Load Family From DB' allows users to see family members in the 'Family Panel', even if they do not exist within the built view.
	The 'Include Family Members' option also affects searches run using the Global Search and Current View Search functions.
	New ability to lookup a view by description in review.
	Audio and video files can now be played directly in the review interface through the Doc and Native viewers.
	Updating a project's company in processing will also update the company in the review environment.
View Manager	Added a 'Total Execution Time' field in the review job browser.
	Added a source selector to the View ID exclusion dialogue.
	Revamp of automation. New options for sorting and grouping files when batching and much greater flexibility for rules when checking documents in.
	Various view splitters combined into more robust Splitter Wizard.
	New splitter to create one view per unique metadata value in a field.
	Overhauled the Tag Manager to be more user friendly and more accurately reflect what users will see in review.
	View Manager menu renamed from 'Tag Manager' to 'Tagging Actions'.
	ND and ETA build wizards now have an 'Override Defaults' option that, when triggered, can be used to troubleshoot problematic data.
	New Reverse Lookup functionality to determine what user/role has access to a specific object in a project.
Security	New Permissions tab in the Security Manager can be used to audit which users and roles have access to a specific permission or object.
	New page added to the Add Users Wizard for directly assigning roles to a new user.
	Removed ability to create two users with the same name.
	New user option 'Skip Login Dialog' in Security Manager allows end users to avoid initial login dialog

Viewpoint 6.0 Release Notes

	box.
	Security Manager now saves position and size of panels used in previous sessions.
Security (cont.)	New permission 'Access VIS' added for Viewpoint Interactive Search. This permission will have no effect until the release of the VIS functionality in a subsequent 6.0 patch release.
	New permission 'Securable Lookup' added to control access to the Permissions tab and Security Access context menu options.
Advanced Tools	Added ability to build multiple views simultaneously in stratas and CA.
	Strata appearance can be tweaked by the average of a field value.
	Improved speed when opening near duplicate groups containing many documents.
	Build View and Review option added to the near duplicate groups panel.
	New 'Size of Zone' option configurable for users to specify how many identical lines of text should be shown for text blocks that are identical when using the 'Show Differences' feature when building Near Duplicates.
	Better handling of similar emails that have minor differences exclusively from quote characters when threading emails.
Delivery	Documents can now be image placeholdered by organizational code.
	Users can rerun OCR text on a single redacted document, rather than all redactions in the delivery.
	Users can now import and export delivery settings to and from a delivery.
	Redacted documents can now have selected metadata fields cleared during export.
	Added new options related to delivery of documents with native redactions.
	X-Ref File Name now defaults to the Volume prefix and numbering options selected in the numbering options.

Bug Fixes

Processing	Improved handling of password handling certain PDFs with RC4 128b encryption.
	ND status of views no longer inappropriately cleared during posting.

Viewpoint 6.0 Release Notes

	Resolved error dialogue that sometimes occurred when attempting to tiff OneNote files.
	Resolved error when attempting to remove an adaptor associated with a given File ID.
	Resolved issue when trying to process data from a provided file list.
Importing	New error message when two documents both point to the other as its parent and create a conflict.
Review	Removed error when user profile defaults to a project that no longer resides in the environment.

Viewpoint 6.0.2

Processing	Sped up deletion of medias.
	Resolved issue with extracting attachments from certain signed P7M files with corrupt MSG attachments.
Review	Issue Tag field now compatible with word wrap option.
	Resolved out of memory error when attempting to save the redacted version of a document containing hundreds or thousands of redactions.
	Resolved issue with some keyword highlighting being shifted.
	Resolved error when trying to rebuild views created prior to 5.7 with production beg and end bates information in the metadata tab.
Reporting	Resolved issue where View was not locked after delivery.
	Various formatting and speed improvements.

Viewpoint 6.0.3

Review	Redaction settings for color, size, and label are now saved on a per user, per project basis.
	Unprotected native redactions now receive a highlighting color in the native redaction history panel.
Processing	Resolved error when trying to ignore over 1,000 files from the processing application.
Importing	Resolved error occurring when multi-page tiffs were imported with a circular reference.

Viewpoint 6.0 Release Notes

Viewpoint 6.0.4

Review	Improved automation checkout speeds when utilizing ETA and ND.
	Resolved issue with keyboard shortcut option being disabled inappropriately.
	Resolved error when building multiple views simultaneously in CA and Stratas.
	Resolved issue with black border not appearing around white redactions.

Viewpoint 6.0.5

Reporting	Resolved issue with the Keyword Hit List by View report returning 0 values for complex searches in the 'This Term Only' column
	Resolved error when running the World List report with no filters applied
Review	Added support for native redaction in Office 2013
	Added several stability updates for native redaction
	Exporting from the document grid in Review now exports in .XLSX format instead of .CSV
Delivery	Resolved issue that was preventing users from skipping delivery volumes and bates numbers in the grid interface

Viewpoint 6.0.6

Import	Resolved issue where BaseDocID field was not updated when adding new docs to an existing media.
Review	Resolved error when exporting documents to Excel if more than 2,100 docs were highlighted when utilizing the 'Load Family from DB' option
PTR	Added Post to Relativity application to installer
