

7.5.4 Release Notes

The following is a highlight of the new improvements available in the latest version of the Viewpoint eDiscovery software platform.

Classic Review

- Use WebView2 as Document Viewer is now defaulted to Off, so IE is back to being the default HTML viewer
- Users should no longer receive an exception error when changing projects while having the Source Selector panel docked on their main dashboard
- Addressed an occasional error when users change forms

Reports

- Corrected an error that could occur when trying to execute a report after having tagged documents

Web Search

- Following operators are now available for Custom fields in Rapid Search: Equals, More Than, Less Than, More Or Equals, Less Or Equals, Contains, Starts With, Ends With, Does Not Contain, Does Not Equal, Is Blank, Is Not Blank
- Users no longer get an “incorrect syntax error” when searching custom fields with no source selected

Delivery

- Fixed a bug preventing users from entering a Volume Prefix directly into the Delivery Grid
