

Search and filter settings, in Processing and Review apps

Build in Remote Desktop in Processing application

Build in audio/video files viewer in Processing application

The screenshot displays a software interface with two main panels. The top panel, titled "Stage: Done - Filtered", contains a table with the following data:

	Doc ID	Document Title	Original File Name	Original Ex...	File ID Description	Original File Size	Errors
☐	2460037						
☒	2460037	Greeting_Change_0...	Greeting_Change_0...	WAV	RIFF/WAVE Audio...	628,708.00	

Below the table, there are input fields for "0" and "1", and a text field containing "628,708". A filter bar at the bottom of the table shows the filter expression: "[Original Extension] <= 'VSD' And Starts with([Doc ID], '2460037')".

The bottom panel, titled "Native", displays an audio waveform. The waveform is a green line on a black background, showing a series of peaks and valleys. Below the waveform is a playback control bar with a "Paused" status, a progress slider, and standard audio controls (play, stop, previous, next, volume).

Combine Custodian, Scope and Media filters into one panel

ExIF data collected from images now added to EDocSummary table fields instead of text. Individual fields (i.e. Author, Comments) filled from specific EXIF tags and all of the tags added into Keywords field.

RTF metadata collection

Viewpoint will collect summary metadata fields from RTF documents

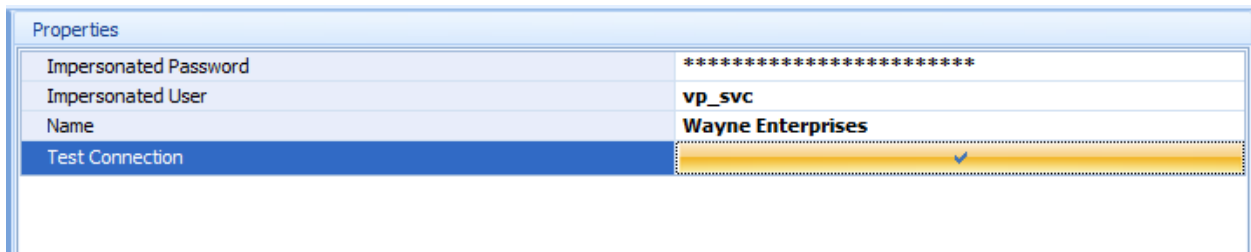

The screenshot shows a 'Raw Data' window with a tree view on the left and a table of metadata on the right. The tree view includes categories like EDoc, EDocAttribute, EDocEmail, EDocFileSystem, EDocFilter, EDocOperation, EDocPath, and EDocSummary. The EDocSummary category is expanded, showing a list of metadata fields and their values.
